Professional Summary

Mobile-first software developer pursuing B.Tech in Computer Science, with experience building AI-integrated mobile and web applications end-to-end using React Native, Expo, and Node.js. Demonstrated ability to identify real-world problems, architect multi-role platforms, and deliver demo-ready products with institutional buy-in. Hands-on experience in developer advocacy and AI-focused community engagement through Google.

Technical Skills

Languages: C, C++, Java, Python, JavaScript, TypeScript, HTML, CSS
Mobile Development: React Native, Expo, NativeWind, Android Studio
Web & Backend: React.js, Node.js, Tailwind CSS, REST API Development
Databases: MySQL, PostgreSQL, MongoDB
Tools & DevOps: Git, GitHub, Docker, Postman, VS Code, pgAdmin 4
CS Fundamentals: Data Structures & Algorithms, OOP, DBMS, Operating Systems
AI & Others: Prompt Engineering, AI Agents, AI Tools, MS Excel

Work Experience

Google Student Ambassador **Aug 2024 – Jan 2025**

- Conducted Gemini AI workshops and hands-on sessions on campus, enabling students to integrate Google's generative AI tools into their development workflows.
- Organized and led Gemini-focused events and tech talks, driving student awareness of AI-powered development capabilities across the campus community.

1M1B | AI & Sustainability Program Participant **Jul 2026**

- Completed a structured AI and sustainability-focused program, exploring applications of artificial intelligence in addressing large-scale global development challenges.

Projects

Keepr – Personal Ownership Vault | *React Native, Expo, Supabase, Google Gemini API, Zustand* | GitHub

- Built a personal ownership vault to organize purchased assets, warranties, receipts, return deadlines, and service history, featuring a Vault Dashboard with summary metrics and upcoming deadline highlights.
- Implemented Supabase Auth (JWT sessions), RLS-enforced PostgreSQL database, and private storage buckets for user-scoped item photos and vault documents, with a background sync queue to handle transient network failures.
- Integrated Google Gemini Multimodal API via Supabase Edge Functions for AI-powered receipt scanning – extracting merchant, line items, and GST breakdowns server-side with automatic document classification.

TeamForge AI | *React, Node.js, PostgreSQL, LLM Integration* | GitHub

- Built an AI-powered workforce allocation system that analyzes employee skill profiles, past project history, and current workload to auto-recommend the optimal team for any incoming project.
- Implemented automated email notifications on team assignment and a real-time project progress dashboard, enabling a single operator to manage end-to-end project coordination.
- Embedded predictive analytics for early detection of budget overruns and deadline risks, enabling proactive risk mitigation before project failures occur.

SERS – Smart Emergency Response System | *React Native, Node.js, Web Dashboard* | GitHub | Demo

- Engineered a multi-factor accident detection system analyzing airbag deployment, sudden speed drops, cabin air pressure changes, and voice-triggered SOS keywords to autonomously confirm emergencies without manual input.
- Implemented a 10-second false-alert cancellation window before auto-dispatching GPS location to family contacts and flagging the incident on the nearest hospital's live dashboard for ambulance assignment.
- Developed a dedicated hospital web dashboard and a citizen/driver mobile app (React Native); currently at demo stage and pursuing hospital partnership integrations.

Education

KCC Institute of Technology & Management **CGPA: 7.62** **2023 – 2027**
B.Tech in Computer Science Engineering *Greater Noida, India*

Certifications

- **Software Engineering Job Simulation** | *JPMorgan Chase & Co. via Forage*
- **Android Development Training Program** | *Codec Technologies (ICAC Recognized)*
